

FOR IMMEDIATE RELEASE

## Syniverse Wins Méditel Clearing, Anti-Fraud Contracts

*North African operator to adopt full suite of data clearing,  
financial clearing and roaming anti-fraud protection*

TAMPA, Fla. – June 18, 2008 – [Syniverse Technologies](#) (NYSE: SVR), a leading provider of technology and business solutions for the global telecommunications industry, announced today that Méditel has selected several Syniverse solutions that will both simplify the complex and costly processes that underlie data and financial clearing, as well as protect Méditel against the growing global threat of roaming fraud.

Méditel, Morocco's largest private telecom operator, will use [Syniverse Data Clearing House \(DCH\) for GSM](#), [Syniverse Financial Clearing House \(FCH\) for GSM](#) as well as [Syniverse DataNet](#), the company's award-winning roaming anti-fraud service, as a total solution. These services will enable the operator to focus on the performance and development of its retail, wholesale and enterprise businesses.

"Over the past year, we have gained traction with operators on the African continent who are choosing Syniverse for clearing and fraud protection," said Eugene Bergen Henegouwen, Executive Vice President, EMEA, Syniverse. "Because Méditel has decided to implement all three of these Syniverse products, it will have a complete, end-to-end data and financial clearing solution as well as the industry's most sophisticated anti-fraud protection. This clearly validates our position as the global single-source clearing and fraud protection expert."

Syniverse FCH provides a full spectrum of invoicing and revenue collection services between operators as their subscribers move in and out of each other's networks and use voice, messaging and data services. Syniverse already provides FCH services to more than 90 mobile operators in Europe, the Middle East, Africa, Asia Pacific and the Americas.

Syniverse DCH effectively and efficiently manages data clearing and roaming operations for an operator, minimizing the resources required to handle roaming accounting and ensuring the rapid exchange of data records that drive accurate invoicing and settlement, and increase revenue assurance.

Syniverse DataNet, a Near Real Time Roaming Data Exchange (NRTRDE) service, provides roaming fraud protection by ensuring that roaming data records used to spot fraudulent behavior are exchanged between home and visited operator partners as rapidly as possible. The solution also ensures Méditel meets the October 2008 target date to implement new anti-fraud standards specified by the GSM Association's (GSMA) NRTRDE initiative. Syniverse DataNet was named "Best Roaming Product or Service" in the technology category of the GSMA's 2008 Global Mobile Awards.

Jalil Tahfi, Director of Customer Relationships for Méditel, said moving his company's business to Syniverse was an easy decision.

"Our first priority always is to provide an excellent product for our subscribers," Tahfi said. "Because we fully trust Syniverse's expertise in the financial and data clearing sector as well as in the fraud prevention arena, we will be able to focus our efforts on optimizing performance reliability and quality of service of Méditel."

### **About Syniverse**

Syniverse Technologies (NYSE:SVR) solutions allow more than 600 communications companies in over 120 countries to provide seamless mobile services by making it possible for disparate technologies and standards to interoperate. Syniverse's flexibility and customer focus permit its customers to quickly react to market changes and demands, enabling the delivery of everything from voice calls to sophisticated data and video services wherever and whenever subscribers need them. With more than 20 years in the industry, Syniverse is headquartered in Tampa, Florida, U.S.A., and has offices in major cities around the globe. Syniverse is ISO 9001:2000 certified and TL 9000 approved, adhering to the principles of customer focus and quality improvement practices.
