

How Are You Protecting Your Business from the \$38 Billion Fraud Risk?

In their 2015 report, the Communications and Fraud Control Association estimated that communication service providers stood to lose \$38 billion from fraudulent activity alone.

At Syniverse, we offer a full suite of cloud-based solutions to help service providers combat these increasing fraud threats. Our solutions use a sophisticated analysis technology that works in combination with high-speed processing of event records and a modular architecture that allows customers to use only the services they need.

Their expertise combined with the information our systems collect from around the globe, enables Syniverse to identify fraud patterns critical to an operator's ability to proactively respond to an attack.

Provide a 24/7 monitoring and analysis team to allow customers to make the right decisions at the right time.

Detect and block fraudulent subscribers proactively.
