

Link2One. Simplify Roaming Partner Management

Business Challenge

Bilateral roaming relationships are an industry standard, but establishing and expanding roaming services has become complex and managing bilateral relationships has become costly. As operators face new challenges of providing maximum roaming coverage for Voice Services, CAMEL, GPRS and 3G, all eyes are on a cost-effective and simple solution.

Solution

Link2One offers you a simple solution: With just one agreement and one connection you'll have coverage around the world.

A few simple network and billing configurations get you up and running on our Single IMSI Roaming Hub, with the service level and capabilities of traditional bilateral roaming agreements.

Maximize your Roaming Business

Link2One helps you to increase your roaming footprint with an extensive worldwide GSM Hub coverage

Partner Connection Management

Link2One provides an online application supporting you to elect and launch roaming connections. An innovative process enables you to open your new connections faster.

Quality of Service

Quality of Service is a key element to assure service delivery to your subscribers. Link2One tests all your connections on a regular basis.

Link2One roaming model
